

Oilseeds: World Markets and Trade

China Tariffs on Canadian Canola Prompt Alternative Imports

In August, China imposed preliminary anti-dumping duties on rapeseed imports from Canada. Coupled with previous duties (imposed in March 2025) on rapeseed meal and oil from Canada, China now has prohibitive tariffs on all Canadian canola products.

China depends on rapeseed and rapeseed products imports. Rapeseed meal is a desirable feed for the aquaculture industry as its amino acid profile is well suited for fish diets aside from fish meal – a costlier alternative. Canada supplied the majority of China's rapeseed meal imports until May 2025, when the impact of tariffs became noticeable. China's domestic rapeseed production has been insufficient to meet its feed demand, and to ensure ample supply for domestic industries, China is engaging with alternative trade partners to replace Canadian sourced rapeseed products.

Since the rapeseed meal tariffs began in March, India has emerged as the largest supplier of rapeseed meal to China. This novel trade flow comes at a time when India's rapeseed meal domestic consumption has declined on increased feeding of dried distillers grains from an increased ethanol blend rate. This trend continues to build with the Solvent Extractors' Association of India reporting July rapeseed meal exports to China totaling almost 100,000 tons. In 2025/26, China is expected to import 2.6 million tons of rapeseed meal, 400,000 tons higher than the previous estimate, but still a 3-year low.

Tariffs on imports of rapeseed from Canada are expected to reduce China's total rapeseed imports due to limited eligible suppliers. Australia is in discussions with China to develop a phytosanitary framework after being shut out of the market since 2020 due to detections of blackleg disease. Access could be restored after a protocol is reached and successful trial shipments are implemented. Yet without Canada and Australia, 2025/26 China rapeseed imports are forecast at 4.1 million tons, 700,000 lower than the previous estimate and a 4-year low.

New Zealand Increases Supplemental Feedstocks, Raising Palm Kernel Meal Imports

This month, New Zealand's imports of palm kernel meal are increased 200,000 metric tons to a record high of 2.7 million tons for the 2024/25 marketing year (Sep-Aug). New Zealand is the world's largest importer of palm kernel meal, accounting for nearly 30 percent of global imports in MY 2023/24. With its large dairy industry, New Zealand imports palm kernel meal as a major feed ingredient for dairy cattle.

Following a decline in national herd numbers in 2022/23 in response to domestic environmental policy changes limiting fertilizer use for grazing pasture, consumption of palm kernel meal is forecast to increase as national herd numbers recover slightly. In the current marketing year, in response to dry pasture conditions in some regions and higher milk prices, farmers have increased inclusion of supplementary feedstocks to maintain production levels seasonally. In the 2025/26 marketing year, assuming normal weather conditions, New Zealand is forecast to import 2.5 million tons of palm kernel meal, down 200,000 tons from the previous year. Indonesia leads exports of palm kernel meal to New Zealand with nearly 60 percent market share, with Malaysia following in second with over 40 percent.

OVERVIEW 2025/26

The global oilseeds production forecast is raised this month on higher Canada rapeseed, Russia soybean, and Russia and Kazakhstan sunflowerseed, offsetting declines in India soybeans and Ukraine and EU sunflowerseed production. Global oilseeds trade is down on decreased Canada rapeseed and U.S. soybean exports largely offsetting increased exports of Russia and Canada soybeans. Global oilseeds crush is down on decreased India and Argentina soybean, China rapeseed, and Ukraine and EU sunflowerseed crush, offsetting increased U.S. soybean, Canada rapeseed, and Russia and Kazakhstan sunflowerseed crush. Global oilseeds ending stocks are forecast higher on raised Canada rapeseed offsetting decreased Argentina soybean stocks. Global oilseed meal trade is raised on higher India rapeseed and U.S. soybean meal exports, offsetting a reduction in India soybean meal exports. Global vegetable oil trade is lowered on decreased Ukraine sunflowerseed, Guatemala and Cote d'Ivoire palm, and Argentina soybean oil exports, offsetting increases in Russia and Kazakhstan sunflowerseed oil exports. The projected U.S. season-average farm price for soybeans is decreased 10 cents to \$10.00 per bushel.

OVERVIEW 2024/25

Global oilseeds production is raised this month on higher soybean production in Ukraine. Global oilseeds trade is raised on higher Argentina and Ukraine soybean exports, offsetting minor decreases in Canada rapeseed and Brazil peanut exports. Global oilseeds crush is lowered on decreases to Russia sunflowerseed and Bangladesh soybean crush. Global oilseeds ending stocks are lowered on decreased Argentina, Bolivia, and Canada soybean stocks, largely counteracting increases in EU and Canada rapeseed. Global oilseed meal trade is unchanged on lower Argentina and Brazil soybean meal, balancing increases in U.S. soybean meal and India and Canada rapeseed meal exports. Global vegetable oil trade is increased, mostly on higher Indonesia palm oil exports.

The projected U.S. season-average farm price for soybeans is unchanged at \$10.00 per bushel.

EXPORT PRICES

Since the last WASDE report, soybean export prices were largely unchanged despite some mid-period fluctuations. U.S. soybean export prices increased to \$415/ton in late August following reports of worsening crop conditions. This reversed in September as U.S. soybean prices retreated again, in part due to lack of demand from China. Brazil prices were relatively stable but are now trading at a \$40/ton premium to U.S. beans. Soybean meal prices remained higher than the July average, but were largely unchanged on net since the last WASDE. U.S. soybean meal prices fell alongside soybeans in early September but maintained a premium over Brazil and Argentina meal.

U.S. soybean oil export prices remained elevated on strong domestic demand but declined slightly in early September, while Brazilian and Argentine soybean oil prices were comparatively flat. Ukrainian sunflower oil prices increased on reduced production expectations in the Black Sea region as old crop exportable supplies continue to diminish seasonally. EU rapeseed oil export prices ticked up slightly, while Indonesia and Malaysia palm oil prices have risen on accelerating demand.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
